

EKCHAKRA International PVT LTD

Ekachakra literally means "one wheel" (*eka* meaning one, and *chakra* meaning wheel) in Sanskrit. EKCHAKRA is working like that and provide long & wide solution into one wheel under EKCHAKRA. The Group is diversify into not into 1,2,3 sector its working into many sector with their own branding .The moto of the group is to serving multiple sector.

Founder Message

EKCHAKRA GROUP is combination with New Era Team and Old Experience team this give a balance to grow the company in National & International label .

OUR Focus is to make OUR Branding and Supply Chain to every person into Worldwide in any sector, I knew its long journey and I believe that our Team and our Clientele are ready.

We always welcome New Idea, New Product, New services, if you have such an Idea Kindly share with me.

Awaiting such Idea & support Thanking you!

TEAM

Director – PAA SOLAR / EKCHAKRA EXPORT

MR. Pandey is Director and Group Director and His reasonability is looking PAA SOLAR & EKCHAKRA EXPORT.

Director – SHILP CRAFT

PUNAM is DIRECTOR into Shilp Craft and she is looking Entire company P&L. Company is involve into craft Business and Route the Operation from E Commerce and Multi another Poral like Amazon.in, Amazon.com, Bazar.com and other

Director – RJ Travel Junction

Ritesh is DIRECTOR into RJ Travel Junction and he is looking Entire company P&L. Company is involve into Tourism Business and Route the Operation into India. RJ Travel Junction Provide solution of Domestic with International Clints also.

Director-DELIGHT APPREAL

AASTHA is DIRECTOR into Delight APPERAL and she is looking Entire company P&L. Company is involve into Apparel Business and Route the Operation from E Commerce and Multi another Poral like Amazon.in, Amazon.com, Bazar.com and other

Director-AAP KA HAQ

Aashray (BA LLB) is DIRECTOR & into aap ka haq and he is looking Entire company P&L. This organization is into Provide Legal & Personal Advice into domestic & International Sector.

GROUP - Human Resource – EKCHARKRA GROUP

Priyanka is an experienced Human Resources leader and looking entire group New Human Requirment, Time to time trained Them and Enggae them into company goal.

GROUP Financial Advisor – EKCHARKRA GROUP

MR Dinesh is Professional and Qualified Charted Accountant. HE looking all account Financials and Certificates .

GROUP Marketing Manager – EKCHARKRA GROUP

Mr. Bhardwaj is our Group Marketing Manager and he looking entire website, catalog, Video and entire Promotion & Issue for Group.

Our Mission

To deliver affordable, high-quality Product/ Service solutions worldwide, fostering better lives & Luxury through innovative technologies. We strive to make accessible to every household driving environmental stewardship and growth for a socity, more prosperous future.

Our Vision

To fulfill mission this regularly we develops the our vendor regularly and give them training to demand latest requirement into the world so that they can be ready and invotation

OUR Associate Company

EKCHAKRA International PVT LTD – SERVING in EXPORT (SOLAR & FMCG)

RJ Travel Junction- SERVING into Tour & Travel

Shilp Craft – E commerce and Serving into Craft Business Nation& International

delightapparel-E commerce and Serving into Appreal Business Nation& International

AAP KA HAQ- Ecommerce provide legal & genuine Advice during your problem

PRODUCT

RICE – Basmati, NON Basmati, State Rice

Indian rice divides mainly into Basmati and non-Basmati varieties, with specific types tied to major producing states like Punjab, West Bengal, and Andhra Pradesh. Basmati is famous for its long grains and aroma, while non-Basmati includes diverse regional

<https://kumudgroup.com/types-of-rice-basmati-non-basmati-more-varieties/>

Makhana

Makhana (fox nuts) comes in various types categorized by size, processing state, and flavor profiles. The primary options include **raw makhana**, **puffed (Phool) makhana**, and **flavored varieties**.

<https://merakisan.com/types-of-makhana/>

Jeera (Cumin seed)

Cumin is a flowering plant in the family Apiaceae, native to the Irano-Turanian Region. Its seeds – each one contained within a fruit, which is dried – are used in the cuisines of many cultures in both whole and ground form.

Lahsun powder

Garlic powder is a spice that is derived from dehydrated garlic and used in cooking for flavor enhancement. The process of making garlic powder includes drying and dehydrating the vegetable, then powdering it through machinery or home-based appliances depending on the scale of production.

RED Mircha Powder

Red mirch powder (red chili powder) is a spicy kitchen staple made from ground dried red chilies, came into 50g,100g,250g,500g & 1000G. It adds hot flavor and bright red color to food.

Key Characteristics & Uses

- **Flavor & Heat:** Ranges from mildly pungent to extra spicy depending on the chili variety used (such as Guntur, Byadigi, or Mathania).
- **Culinary Uses:** Essential for curries, *dals*, *sabzis*, chutneys, marinades, and street foods.
- **Varieties:** Standard hot chili powder provides high heat, while Kashmiri chili powder offers a vibrant red color with very mild spice.

Nutrition & Storage

- **Nutrients:** Contains Vitamin C, Vitamin A, capsaicin (which gives the heat), and minerals like iron and potassium.
- **Storage:** Keep in a cool, dry place inside an airtight container and always use a dry spoon to prevent moisture damage.

Garam masala Powder

Garam masala powder is a fragrant blend of ground warm spices widely used in Indian cooking to add deep flavor, aroma, and mild heat. Popular commercial 50g,100g,250g options.

Common Ingredients

- **Cumin and Coriander:** Form the earthy base of the mix.
- **Cardamom, Cloves, and Cinnamon:** Provide the sweet, sweet-scented, and signature warming notes.
- **Black Peppercorns and Mace:** Add subtle heat and pungent depth.

Usage and Storage

- **Cooking Use:** Best added during the final minutes of cooking or as a finishing touch to preserve its delicate essential oils.
- **Storage:** Keep in an airtight glass container away from moisture and direct light to maintain freshness for up to 3 months

Drumstick & Powder

Drumstick powder, commonly known as Moringa powder, is a nutrient-dense green superfood made from dried *Moringa oleifera* leaves. It is rich in vitamins A, C, and E, calcium, iron, and plant protein.

Key Nutritional and Health Benefits

- **High Nutrients:** Packed with iron, calcium, and antioxidants that fight cell damage.
- **Immunity & Energy:** Helps boost natural body energy and strengthen the immune system.
- **Digestion Support:** Loaded with fiber to support a healthy gut and digestion.

Common Uses

- **Daily Drink:** Mix 1 teaspoon (3–4g) into warm water with honey and lemon, or blend into juices and smoothies.
- **Cooking:** Stir into dal, soups, gravies, or mix directly into roti dough and idli/dosa batter.
- **Skincare:** Used as a natural face pack when mixed with yogurt or rose water.

Gawar gum

Guar gum is a natural, water-soluble plant fiber and powder made from the seeds of the guar bean plant (*Cyamopsis tetragonoloba*). It acts as a thickener, binder, and stabilizer in foods, cosmetics, and industrial items.

What It Is and How It Works

- **Natural source:** Made from the inner part (endosperm) of guar seeds.
- **Structure:** A long chain of sugar molecules (galactose and mannose) called a galactomannan polysaccharide.
- **Water absorption:** Mixes easily in cold water to make thick gels and liquids.

Common Uses

- **Food:** Thickens ice cream, sauces, soups, and baked goods.
- **Health:** Used as a soluble dietary fiber supplement to help digestion and lower cholesterol.
- **Industry:** Used in cosmetics, paper, and textiles.

Cowdung

Cow dung is the nutrient-rich waste product of bovine animals like cattle, buffalo, and yaks, primarily composed of undigested plant matter, water, and gut microbes. It is widely used as an organic fertilizer, a traditional fuel source, and for biogas production.

Composition and Nutrients

- **Water content:** Roughly 80% in fresh waste.
- **Organic matter:** Packed with fibrous materials like cellulose, lignin, and hemicellulose.
- **NPK Ratio:** Typically contains a balanced nutrient profile of about 3% nitrogen, 2% phosphorus, and 1% potassium (3-2-1 NPK)

Main Uses

- **Agricultural Fertilizer:** Composted cow dung improves soil texture, enhances moisture retention, and supplies slow-release nutrients to crops and garden plants
- **Biogas Fuel:** Fermented or fresh dung serves as a primary input for biogas plants to generate renewable methane gas for cooking and electricity.
- **Traditional Fuel and Craft:** Dried into flat cakes, it is used as a low-cost biomass fuel for fire or traditional rituals, as well as an ingredient in eco-friendly products like flower pots and adobe bricks.

Ghee

Ghee is a type of clarified butter originating from ancient India, made by simmering butter until all water evaporates and milk solids brown and separate. It has a rich, nutty flavor, a high smoke point, and a long shelf life without needing refrigeration.

What is Ghee Made Of?

- **Pure fat:** Ghee is roughly 99.5% pure fat with almost zero water or moisture.
- **Lactose-free:** The milk sugars (lactose) and proteins (casein/whey) are strained out during the heating process, making it easier to digest for many people.
- **Vitamins:** It contains fat-soluble vitamins like Vitamin A, E, and K.

Uses and Benefits

- **Cooking:** Ideal for frying, sautéing, and roasting because it does not burn easily.
- **Ayurveda:** Valued in traditional Indian medicine to support digestion and overall vitality.
- **Storage:** Keeps fresh at room temperature for weeks if kept clean and dry.

SOLAR

SOLAR PANEL

TOPCon solar panels use advanced Tunnel Oxide Passivated Contact technology on N-type silicon wafers to deliver higher efficiency, lower degradation, and superior heat tolerance. Popular module outputs range from 500Wp to 640Wp with efficiencies exceeding 22% to 23%.

Core Technology & Specs

- **Structure:** Features an ultra-thin 1-to-2-nanometer silicon oxide tunnel layer and a doped polysilicon contact at the rear side.
- **Efficiency:** Standard module conversion rates range from 22% up to 23.32%.
- **Power Output:** Commonly available in ranges from 530Wp to 630Wp+ for commercial and utility uses, and smaller 275W variants for tight spaces.
- **Degradation:** About 1% in the first year, followed by a minimal 0.4% annual drop through year 30.
- **Warranty:** Backed by a 30-year linear performance warranty
- **Key Benefits**
- **Low Degradation:** N-type silicon reduces light-induced and electron recombination losses.
- **Heat Resilience:** Maintains strong performance in hot climates due to a favorable temperature coefficient.
- **Bifacial Generation:** Dual-glass options capture reflected light from the rear side to boost overall energy yield.
- **Low-Light Output:** Generates steady power effectively on cloudy days or during early morning and late evening hours.

Grid TIE INVERTER

A grid-tie inverter converts direct current (DC) from solar panels into alternating current (AC), synchronizes it with the public utility grid, and shuts down during outages for safety.

How It Works

- **DC to AC Conversion:** Changes raw solar power into standard household electricity.
- **Grid Synchronization:** Matches the exact voltage, frequency, and phase of the local utility lines.
- **Net Metering Export:** Sends extra power back to the utility company to earn credits.

Key Features

- **No Batteries Needed:** Uses the public power grid as a virtual storage system, lowering overall setup costs.
- **High Efficiency:** Modern units often achieve over 98% conversion efficiency using Maximum Power Point Tracking (MPPT).
- **Safety Shutdown (Anti-Islanding):** Automatically stops working during a grid blackout to protect utility workers fixing the lines.

Hybrid Inverter

A hybrid solar inverter combines a solar inverter and a battery charge controller into a single unit. It intelligently manages power flowing between your solar panels, battery storage, and the electrical grid. It converts direct current (DC) to alternating current (AC) while optimizing energy use and providing blackout protection.

Key Features and Benefits

- **Energy Independence:** You store excess solar energy in batteries during the day to use at night or on cloudy days, heavily reducing grid reliance.
- **Backup Power:** In the event of a power outage, the hybrid inverter automatically disconnects from the grid and runs your essential appliances using stored battery power.
- **Net Metering:** Once your batteries are fully charged, the inverter can export any remaining surplus energy back to the utility grid, depending on your local regulations.
- **Smart Energy Management:** Many units feature intelligent load-shifting, time-of-use prioritization, and remote mobile app monitoring.

Types of Hybrid Inverters

- **All-in-One / Multi-Mode:** The industry standard for residential setups. These feature built-in charge controllers, fast-switching UPS capabilities, and are highly customizable.
- **Grid-Tied Hybrid:** Designed primarily for maximizing self-consumption and net-metering. Backup functionality is typically limited.
- **Off-Grid Capable Hybrid:** Heavy-duty systems that operate independently of the grid, often using the grid (or a generator) solely as an emergency backup rather than relying on it daily.

What to Consider When Buying

1. **Battery Compatibility:** Ensure the inverter works with the battery chemistry you prefer (usually 48V or low-voltage lithium-ion LiFePO4 batteries).
2. **Capacity:** Choose a size that matches your peak power needs. For typical household applications, 3kW to 50 kW systems are most common, with prices ranging broadly based on local market availability.
3. **Grid Export Capabilities:** Verify that the inverter is certified by your local utility provider for grid-tied feeding and net metering

Offgrid SOLAR Inverter

An off-grid solar inverter converts direct current (DC) from solar panels and batteries into alternating current (AC) for standalone power systems, requiring a mandatory battery bank and no utility connection. Key components include MPPT charge controllers, pure sine wave outputs, and protective mechanisms.

Core Working Process

- **Solar Harvesting:** Panels capture sunlight and create DC electricity.
- **Regulation:** Internal charge controllers (MPPT or PWM) control voltage to safeguard batteries.
- **Storage:** Extra energy goes into battery banks (Lead-acid or LiFePO₄) for night or backup use.
- **Conversion:** The inverter transforms stored DC energy into usable AC household power.

Key System Specifications

- **Capacity Ranges:** Available from small 1kW units up to 10kW+ heavy-duty systems.
- **Efficiency:** Modern high-frequency variants achieve up to 98% conversion efficiency.
- **Safety Features:** Standard protections include overload, short-circuit, over-temperature, and low-battery shutdown.

LiPO4 Battery

A LiFePO₄ (lithium iron phosphate) battery is a safe, long-lasting rechargeable lithium-ion battery that uses iron for energy storage. It stands out for its **long lifespan**, **high safety**, and **steady voltage output**.

Key Features and Specifications

- **Nominal Cell Voltage:** 3.2V per cell (a standard 12V block is typically 12.8V using 4 cells in series).
- **Cycle Life:** 2,500 to over 5,000 cycles (some advanced cells reach up to 9,000+ cycles).
- **Efficiency:** High round-trip efficiency of 95% or more.
- **Temperature Range:** Safe discharge from -20°C to 60°C; charging from 0°C to 45°C/55°C.

Advantages Over Lead-Acid

- **Weight:** Much lighter, weighing roughly 40% to 50% of an equivalent lead-acid battery.
- **Maintenance:** Completely maintenance-free with no fluid levels to check.
- **Depth of Discharge:** Can be discharged down to 10%–20% safely without harming total life expectancy.

Common Uses

- Solar power storage systems for homes
- Recreational vehicles (RVs) and marine applications
- Backup power and Uninterruptible Power Supply (UPS) systems
